Experimental and Clinical Progress in Cancer Chemotherapy (Cancer Treatment and Research)

Experimental and Clinical Progress in Cancer Chemotherapy (Cancer Treatment and Research)

As in CANCER CHEMOTHERAPY 1, this volume brings to the reader highlights in three different areas of cancer therapeutics: new concepts and models; drug classes; and clinical settings. Topics were chosen because of their timeliness or probable current impact in cancer treatment. Authors were selected on the basis of their ability to provide a critical overview of specific subjects and their involvement in original work. I shall review the aims of this second volume, and then elaborate on the scope of its contents. The principal aim of the volumes on cancer chemotherapy in the 'Cancer Treatment and Research' series, as stated in the preface to the first volume, is to assemble in a concentrated form selected ingredients of chemotherapeutic progress. These ingredients are to include concepts in therapeutic strategy, pre-clinical studies, development of major classes of compounds, identification of new directions and of landmarks of clinical progress. Thus we do not foresee overlap with series which provide an yearly update of chemotherapy in an encyclopedic manner, or reviews of cancer chemotherapy. Unlike those publications, our volumes are not intended to seek a place in shelves as a reference manual. It is this Editor's hope that persons representing various biomedical disciplines will seek the 'Cancer Treatment and Research' chemotherapy volumes to survey advances in the field at regular intervals.
