Introduction to the Cellular and Molecular Biology of Cancer

Introduction to the Cellular and Molecular Biology of Cancer

This new edition of *Introduction and Molecular Biology of Cancer* provides a concise yet comprehensive overview of cancer biology, covering the current status of both research and treatment. For the student or new researcher the breadth of cancer research can appear daunting, yet a broad understanding is essential for translation of laboratory findings into the clinic.

Within the broad scope of the book, each topic is reviewed authoritatively by experts in the field, and the accompanying bibliographies allow rapid access to the relevant current literature. The book covers topics extending from the molecular alterations found in cancer cells and their causes to the current range of approaches to treatment. Since the publication of the previous edition in 1997 there has been unprecedented progress in cancer research: this is reflected by an extensive revision of all the material, and the addition of eight new chapters, covering DNA repair, epigenetic events, the cell cycle, cell immortalization, apoptosis, angiogenesis, animal models, the genome, transcriptome and proteome, radiotherapy and molecular radiotherapy, immunotherapy, and gene therapy. The fourth edition of the popular book will serve as a text for both undergraduate and postgraduate use and also as an introduction for clinicians and scientists new to the field.
