**Artificial Intelligence for Global Positioning System Networks: Theory & Applications** Hussain Saleh  
The importance of the book: The developments of computationally efficient techniques and algorithms that can satisfy the requirements of GPS networking (large networks, logistics, etc) are lagging behind the developments in the GPS technology and in the reduction of observing times. Therefore, the need for an effective computer based heuristic optimization techniques for GPS surveying is extremely necessary. The main purpose of this book is to model the components of the fieldwork using heuristics, within the field of artificial Intelligence, in order to determine the best GPS network design based on geometrical and cost restrictions. These heuristics, which have been researched, designed, developed, implemented and analysed theoretically and empirically, are the most recent and powerful development techniques applicable to a wide range of important problems which occur in a variety of disciplines, such as, statistics, engineering, mathematical programming and operational research, etc.

### **From reader reviews:**

#### **Antoinette Hogg:**

In this 21st millennium, people become competitive in each way. By being competitive right now, people have to do something to make these individuals survive, being in the middle of often the crowded place and notice through surrounding. One thing that often many people have underestimated the idea for a while is reading. Yes, by reading a reserve your ability to survive boost then having chance to remain than other is high. For yourself who want to start reading any book, we give you this specific Artificial Intelligence for Global Positioning System Networks: Theory & Applications book as nice and daily reading e-book. Why, because this book is usually more than just a book.

#### **Jon Gomes:**

The experience that you get from Artificial Intelligence for Global Positioning System Networks: Theory & Applications is a more deep you digging the information that hide in the words the more you get enthusiastic about reading it. It doesn't mean that this book is hard to recognise but Artificial Intelligence for Global Positioning System Networks: Theory & Applications giving you thrill feeling of reading. The writer conveys their point in a number of way that can be understood simply by anyone who read it because the author of this guide is well-known enough. This particular book also makes your current vocabulary increase well. Therefore it is easy to understand then can go with you, both in printed or e-book style are available. We highly recommend you for having this specific Artificial Intelligence for Global Positioning System Networks: Theory & Applications instantly.

#### **George Rodriguez:**

You could spend your free time you just read this book this e-book. This Artificial Intelligence for Global Positioning System Networks: Theory & Applications is simple bringing you can read it in the park, in the beach, train along with soon. If you did not include much space to bring often the printed book, you can buy the particular e-book. It is make you much easier to read it. You can save typically the book in your smart phone. So there are a lot of benefits that you will get when one buys this book.

#### **Charlie Seymour:**

As we know that book is significant thing to add our information for everything. By a e-book we can know everything you want. A book is a pair of written, printed, illustrated or maybe blank sheet. Every year has been exactly added. This reserve Artificial Intelligence for Global Positioning System Networks: Theory & Applications was filled with regards to science. Spend your extra time to add your knowledge about your technology competence. Some people has different feel when they reading a new book. If you know how big advantage of a book, you can feel enjoy to read a publication. In the modern era like at this point, many ways to get book that you just wanted.
