Local Fields (Graduate Texts in Mathematics) Jean-Pierre Serre

The goal of this book is to present local class field theory from the cohomological point of view, following the method inaugurated by Hochschild and developed by Artin-Tate. This theory is about extensions—primarily abelian—of "local" (i.e., complete for a discrete valuation) fields with finite residue field. For example, such fields are obtained by completing an algebraic number field; that is one of the aspects of "localisation". The chapters are grouped in "parts". There are three preliminary parts: the first two on the general theory of local fields, the third on group cohomology. Local class field theory, strictly speaking, does not appear until the fourth part. Here is a more precise outline of the contents of these four parts: The first contains basic definitions and results on discrete valuation rings, Dedekind domains (which are their "globalisation") and the completion process. The prerequisite for this part is a knowledge of elementary notions of algebra and topology, which may be found for instance in Bourbaki. The second part is concerned with ramification phenomena (different, discriminant, ramification groups, Artin representation). Just as in the first part, no assumptions are made here about the residue fields. It is in this setting that the "norm" map is studied; I have expressed the results in terms of "additive polynomials" and of "multiplicative polynomials", since using the language of algebraic geometry would have led me too far astray.

From reader reviews:

Melanie Archer:

The actual book Local Fields (Graduate Texts in Mathematics) has a lot of knowledge on it. So when you check out this book you can get a lot of advantage. The book was compiled by the very famous author. Tom makes some research ahead of write this book. This specific book very easy to read you can find the point easily after reading this book.

Donald Pate:

Don't be worry when you are afraid that this book will probably filled the space in your house, you might have it in e-book method, more simple and reachable. That Local Fields (Graduate Texts in Mathematics) can give you a lot of good friends because by you considering this one book you have issue that they don't and make you actually more like an interesting person. This specific book can be one of one step for you to get success. This reserve offer you information that possibly your friend doesn't learn, by knowing more than some other make you to be great people. So , why hesitate? We should have Local Fields (Graduate Texts in Mathematics).

Carlos Mendoza:

As a pupil exactly feel bored for you to reading. If their teacher requested them to go to the library as well as to make summary for some e-book, they are complained. Just little students that has reading's spirit or real their passion. They just do what the professor want, like asked to go to the library. They go to presently there but nothing reading really. Any students feel that reading is not important, boring along with can't see colorful photos on there. Yeah, it is for being complicated. Book is very important for you personally. As we know that on this era, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. Therefore this Local Fields (Graduate Texts in Mathematics) can make you feel more interested to read.

Michael Wheeler:

E-book is one of source of knowledge. We can add our expertise from it. Not only for students but also native or citizen have to have book to know the upgrade information of year to be able to year. As we know those books have many advantages. Beside we add our knowledge, also can bring us to around the world. Through the book Local Fields (Graduate Texts in Mathematics) we can have more advantage. Don't you to be creative people? For being creative person must want to read a book. Just choose the best book that ideal with your aim. Don't become doubt to change your life by this book Local Fields (Graduate Texts in Mathematics). You can more attractive than now.
