Store separation (AGARDograph) Leon Schindel

Aircraft stores refer to any device intended for internal or external carriage, mounted on aircraft suspension and release equipment, whether or not the item is intended to be separated in flight from the aircraft. Aircraft expendable stores are normally separated from the aircraft in flight such as a missile, rocket, bomb, nuclear weapon, mine, torpedo, pyrotechnic device, sonobuoy, signal underwater sound device, or other similar items. This document assembles technical details relating to store separation and the motion of the store as it traverses the flow field in the vicinity of the parent aircraft. Criteria for safe separation are presented, as well as methods of calculating the flight path of the store.
